BRIAN ADLAWAN

FULL STACK WEB DEVELOPER

I'm a self-driven Full Stack Web Developer with a strong passion for building responsive, user-friendly web applications. My journey began with personal curiosity and quickly turned into a deep commitment to learning and creating meaningful projects. Through hands-on experience, I've developed a strong foundation in both front-end and back-end development.   I graduated from college in 2018 and chose to pursue a career as a web developer driven by a strong interest in technology and problem-solving. Since then, I've dedicated myself to continuous learning and building real-world projects that reflect both creativity and technical skill. I'm passionate about creating user-focused web applications and always open to adopting new tools and technologies across different programming stacks to stay ahead in the evolving tech landscape.

Course: BS Information Technology

Graduated: 2018

BRIAN ADLAWAN

FULL STACK WEB DEVELOPER

Dear Hiring Manager,

I am writing to express my interest in a Full Stack Web Developer position at your company. Although I do not have formal industry experience, I have independently developed and deployed several full-stack applications that demonstrate real-world capabilities and production-quality engineering.

One of my main projects is a monorepo application named **SP-BLOGS**, which features a custom SSR setup using React, Express, and Webpack. It includes dynamic routing, Markdown blog rendering, image handling, MongoDB integration, and a fully configurable theming system using MUI and Emotion. I also built a real-time authentication system using Passport.js with support for Google, Facebook, and Instagram OAuth—dynamically configured for both local and production environments (Vercel/Render).

My toolset includes:

- **Frontend:** React, MUI, Emotion, React Router v6, TypeScript, Markdown, Webpack, Babel
- **Backend:** Node.js, Express, MongoDB (Mongoose), Passport.js
- **DevOps:** Webpack custom builds, dotenv for environment handling, compression, persistent caching, production asset optimization
- **Other:** SSR, OAuth, image metadata handling, custom hooks, and monorepo project organization

I am deeply committed to writing clean, scalable code and following modern best practices. I believe in building not just working software, but maintainable systems that are a joy to work on and a pleasure to use.

I'm excited about the opportunity to work with a forward-thinking team and contribute to building high-quality web solutions. I've attached my resume, which includes links to some of my projects. I would welcome the opportunity to discuss how I can contribute to your team.

Thank you for considering my application. I'm available for an interview at your convenience.

Sincerely,

Brian Adlawan
